

Technical Data Sheet

ANTIQ

PROTECTIVE ANTIQUE – PROTECTIVE AGER

Description:

Treatment with a base solvent that enhances color and gives a wet, transparent, impregnating effect for marble, travertine, stones, granitic finishes such as grizzly, sanded, brushed, flamed or levigated. Generally applied when the material results in discoloration. The product confers an excellent degree of water-repellency. The surface thus protected resists for a long time the aggressive action of spray acids, atmospheric agents and UV rays. It confers an excellent degree of water-repellency. The surface thus protected resists for a long time the aggressive action of spray acids, atmospheric agents and UV rays.

Shelf life

The product will last at least 12 months if stored in normal condition at 20-25°C, kept away from sun lights, humidity and sources of heat.

Safety rules

Please read before any usage, the safety data sheet and the rules written on the label on the tins/drums.

Application surfaces

Marble, granites and other natural stones both rough and polished.

Instruction for Use

Apply ANTIQ on perfectly clean and dry surfaces, possibly cold and not red-hot due to the sun. The product can be applied evenly by brush, spray or with a preferably non-colored cloth. Consumption doses and quantities of use can vary significantly depending on the material to be treated and the type of finish of the same. After a few minutes of application, it is advisable to remove any product excess from the surface with a clean cloth to avoid the formation of sticky surface excesses. If there is an excess, will result in a greasy surface film. Product coverage if applied manually: around 10 - 30 sq.m. / ltr - if applied automatically: around 40 - 70 sq.m. / ltr .

Technical Data

Specific weight at 20°	0.77
Aspect	liquid transparent
Hydro solubility	Insoluble

Coverage

With one litre of product is possible to treat around 08/12 sqm depending on the surface.

Packaging

Available in 1 Ltr.
