

Technical Data Sheet

MARBLE GLUE

High viscosity solid mastic. It is used to glue and repair vertical marble, onyx and stone. The hardened product is already shiny. The low temperature reactivity is excellent. The adhesion to materials and excellent mechanical characteristics represents the outstanding qualities of this product.

The products will last at least 12 months if stored in normal condition between 18-25°C, kept away from sun lights, humidity and sources of heat.

Resin and hardener are chemicals products. Please read, before any usage, the safety data sheet and the rules written on the label on the tins/drums.

Be sure that surface that you must treat is dry, clean and free of dust. Take out the necessary mastic quantity from the tin / can / drum and add 2-3% (compared to mastic weight) of paste hardener. Mix energetically and use the obtained product for your purposes. Do not put the unused final mixture again into the tin. If it is necessary to correct the product colour, use specific colored pasts or metal oxides. Add the colour before adding the hardener until you reach the desired hue and finally you can

add the hardener. Any excess of colour can affect the final characteristics of the mastic. Take care.

Keep the tins well closed after usage. Keep the mastic and the hardener far away from light sources and foremost far away from sun rays.

 $750 \, ml. - 4 \, L - 19 \, L$
